**PATENT - REGISTERED UTILIY MODEL U202031146**

**T**he pandemic caused by virus SARS-CoV-2, better known by the disease named COVID-19, has affected our daily habits since the beginning of 2020. More than a third of the world's population has been on lockdown, forced to take extreme hygiene precautions.

Indeed, the correct placement and removal of safety elements (face masks) and the hygiene at the entrance of the accommodations are key in this new situation.

This sanitary cabinet is a furniture set to be used without touching, to improve the level of cleanliness and to assist in the transition of everyday objects from the potentially infected outdoor area to a safe home area and vice versa.

The cabinet should be placed near the exit door to the left or to the right of the hall or the room, according to the needs.

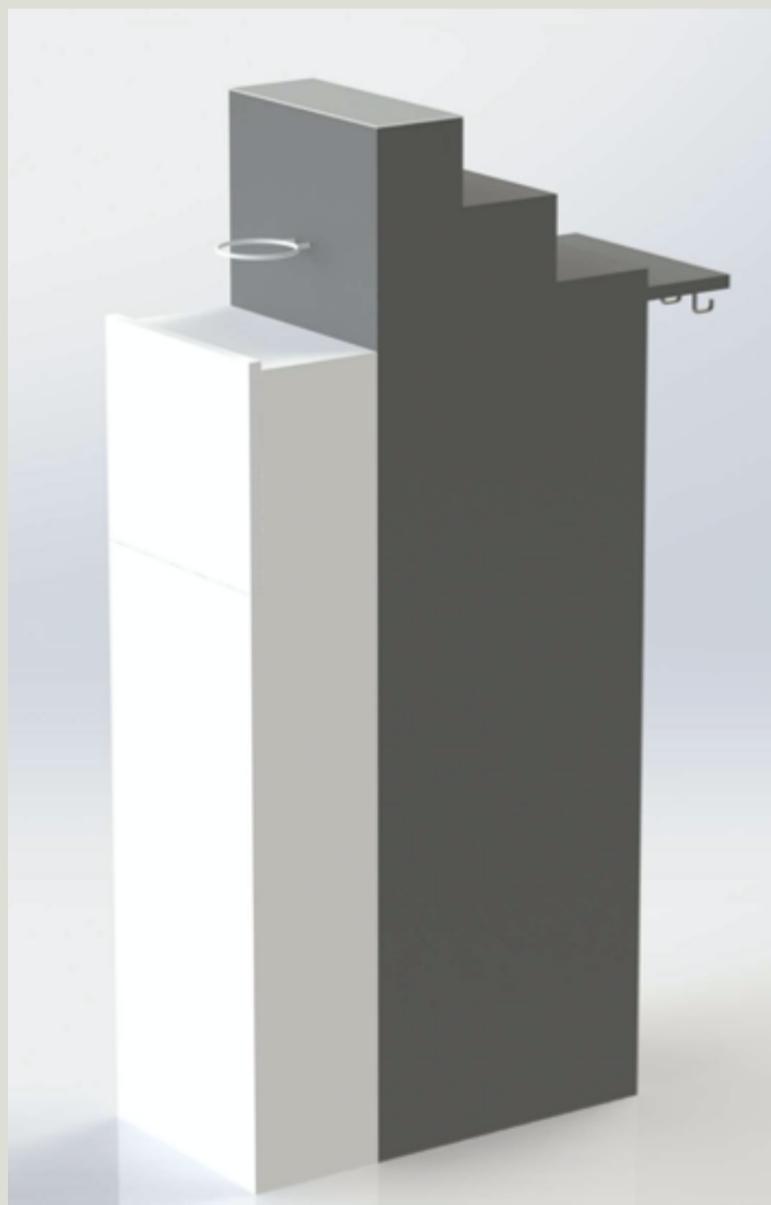

It is divided into two sections, easily recognised by colour in order to make the organisation of everyday objects easier.

### TOWARDS THE INTERIOR OF THE ROOM:

The first section of the furniture has been designed for masks with a convenient elbow opening system.

At the top you can find a ring, a dispenser or similar system to accommodate a bottle of gel sanitizer.

On the top there is a mirror.

## TOWARDS THE EXIT DOOR:

The mirror, at the top, marks the transition area between the two parts of the cabinet.

Below the mirror, there is a disinfection products section (for example disinfecting towels).

Then, there is a second section equipped with an opening leading to the trash can.

These two sections are interchangeable.

Then you find a shelf to place the mobile phone and keys (or any other small objects that you carry in your hand).

5 hooks under the shelf allow you to hang easily the reusable mask and any other objects.

Below you find a space to leave a handbag or bulky objects.

Then you find a space to leave your shoes without using your hands.

Measures:

The maximum height of the furniture, up to the mirror is 120cm (47,25in)

The height of the mask drawer is 95cm (37,40in).

The depth is 29,5cm (11,61in).

The width is 54,8cm (21,57in); including the shelf with the hooks, the total is 66,8cm (26,30in).

Travel restrictions are the very first consequence of the pandemic due to the danger of infection. That is why hygiene stands out as one of the most effective measures to give response to the virus.

Doiqo is a set of furniture that targets the tourism industry (hotels, apartments, etc.), especially designed to regain the traveler's confidence in safety of his or her accommodation.

Doiqo is a storage place for different items of personal use so it can be used even after the pandemic ends. Its sections for disinfectant products and waste can be replaced by decoration or other elements, making an attractive and unique piece of furniture that continues to be useful.

**THANK YOU**
